NEW REPORT · AVON DC1

Needs your OK

Cooling cascade

Staff reported a third small problem in Data hall A: water on the floor, a musty smell and warmer air.

Could cost if we wait	Costs to fix now	Time left before it fails	Waiting for your OK	AI working time
$113,525	$1,010	18 hours	4	1 sec

THE AI'S RECOMMENDATION

Fix it now

Waiting could cost $113,525. Fixing it now costs $1,010, and there are about 18 hours left to act.

What's going on: a cooling unit in Data hall A is leaking, and the main chiller that cools the building is slowly overheating.

Who pays: Lonestar Cloud pays for this repair under their lease (DC1-HALL-A-2024 §8.2), not the landlord.

"Tenant shall maintain, repair and replace the supplemental cooling units installed for Tenant's exclusive use in Data Hall A, at Tenant's sole cost."

Why it decided this

- ✓ The main chiller will hit its safe limit in about 18 hours.
- ✓ Lonestar Cloud and MedRecords Health would lose service, costing $37,000 per hour.
- ✓ 3 recent complaints all point to the same equipment.
- ✓ Building history: Oct 2026: compressor bearing replaced after vibration alarm. Vendor said refrigerant was 15% low at the time.

If you approve

- → Lone Star Mechanical comes Sunday 11:20 AM to fix it ($1,010).
- → Pre-cool Data hall A to 68F supply tonight and shift batch load to hall B until the repair is verified (for 24 hours).
- → Lonestar Cloud gets a heads-up email.
- → MedRecords Health gets a heads-up email.
