OpsCrew workflow: from a small signal to a fix that is approved and sent

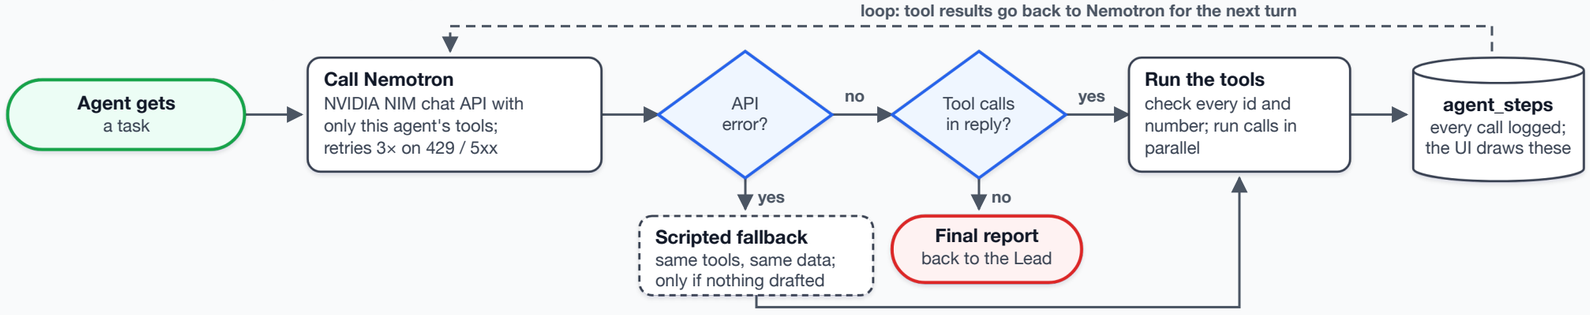

Start at a green oval, follow the arrows through the numbered steps, and end at a red oval. Each lane shows who does the step.

HackUTD 2026 · CBRE · NVIDIA Nemotron · NMC²
Demo numbers from the Cooling cascade scenario

Zoom: what happens inside every agent box (steps 2–6)

Same loop for the Lead and all 4 specialists. Each agent only sees its own tools.

Where it starts and where it ends

A Manager clicks "Run the demo incident" (POST /api/incidents)
B Nightly sweep button, or Vercel Cron at 2 AM (no prompt typed)

End 1 Sweep finds nothing urgent: scores saved, no run
End 2 Fixing is not worth it: brief only, run done
End 3 Manager decides every draft: fixed before it failed
Any step unrecoverable error: run → error, logged
